

## Ferritin, Light Chain Monoclonal Mouse Antibody (FTL/1386)

## **Product Description**

Mammalian ferritins consist of 24 subunits made up of 2 types of polypeptide chains, ferritin heavy chain and ferritin light chain. Ferritin heavy chains catalyze the first step in iron storage, the oxidation of Fe (II), whereas ferritin light chains promote the nucleation of ferrihydrite, enabling storage of Fe (III). Light chain ferritin is involved in cataracts by at least two mechanisms, hereditary hyperferritinemia cataract syndrome, in which light chain ferritin is overexpressed, and oxidative stress, an important factor in the development of ageing-related cataracts.

Primary antibodies are available purified, or with a selection of fluorescent CF® dyes and other labels. CF® dyes offer exceptional brightness and photostability. See the <u>CF® Dye Brochure</u> for more information. Note: Conjugates of blue fluorescent dyes like CF®405S and CF®405M are not recommended for detecting low abundance targets, because blue dyes have lower fluorescence and can give higher non-specific background than other dye colors.

**Stock status:** Because Biotium offers a large number of antibody and conjugation options, primary antibody conjugates may be made to order. Typical lead times are up to one week for CF® dye and biotin conjugates, and up to 2-3 weeks for fluorescent protein and enzyme conjugates. Please email <u>order@biotium.com</u> to inquire about stock status and lead times before placing your order.

Catalog number key for antibody number 1386, Anti-Ferritin, Light Chain (FTL/1386)

Product attributes				
Antibody number	#1386			
Antibody reactivity (target)	Ferritin, Light Chain			
Antibody type	Primary			
Host species	Mouse			
Clonality	Monoclonal			
Clone	FTL/1386			
Isotype	lgG2b			
Molecular weight	19-25 kDa			
Synonyms	Ferritin L chain; Ferritin L subunit; Ferritin light chain; Ferritin light polypeptide; FTL; LFTD; NBIA3			
Human gene symbol	FTL			
Entrez gene ID	2512			
SwissProt	P02792			
Unigene	433670			
Immunogen	Recombinant human FTL protein fragment (aa 38-165) (exact sequence is proprietary)			
Verified antibody applications	IHC (FFPE) (verified), WB (verified)			
Antibody target cellular localization	Cytoplasmic			
Species reactivity	Human			
Antibody application notes	Flow cytometry 0.1-0.2ug/million cells Immunofluorescence 0.1-0.2ug/ml, Western blotting 0.1-0.2ug/ml, Staining of formalin-fixed tissues requires boiling tissue sections in 10 mM citrate buffer, pH 6.0, for 10-20 min followed by cooling at RT fr 20 min, Optimal dilution for a specific application should be			
	secondary antibody, Immunohistology (formalin) 0.1-0.2 ug/mL, Flow cytometry 0.1-0.2 ug/million cells Immunofluorescence 0.1-0.2 ug/ml, Western biotting 0.1-0.2 ug/ml, Staining of formalin-fixed tissues requires boiling tissue sections in 10 mM citrate buffer, pH 6.0, for 10-20 min followed by cooling at RT for			
Positive control	secondary antibody, İmmunohistology (formalin) 0.1-0.2 ug/mL, Flow cytometry 0.1-0.2 ug/million cells Immunofluorescence 0.1-0.2 ug/ml, Western blotting 0.1-0.2 ug/ml, Staining of formalin-fixed tissues requires boiling tissue sections in 10 mM citrate buffer, pH 6.0, for 10-20 min followed by cooling at RT for 20 min, Optimal dilution for a specific application should be			
Positive control Shipping condition	secondary antibody, immunohistology (formalin) 0.1-0.2 ug/mL, Flow cytometry 0.1-0.2 ug/million cells Immunofluorescence 0.1-0.2 ug/m, Western blotting 0.1-0.2 ug/ml, Staining of formalin-fixed tissues requires boiling tissue sections in 10 mM citrate buffer, pH 6.0, for 10-20 min followed by cooling at RT for 20 min, Optimal dilution for a specific application should be determined by user HepG2, HeLa, HL-60 or 293T cells. Pancreas, Liver, Cerebellum
