## SOX9 / SRY-box 9 Monoclonal Mouse Antibody (SOX9/2387)

## **Product Description**

Sox genes comprise a family of genes that are related to the mammalian sex-determining gene SRY. These genes similarly contain sequences that encode for the HMG-box domain, which is responsible for the sequence-specific DNA-binding activity. Sox genes encode putative transcriptional regulators implicated in the decision of cell fates during development and the control of diverse developmental processes. SOX9 plays an important role in the normal skeletal development. It may regulate the expression of other genes involved in chondrogenesis by acting as a transcription factor for these genes. Primary antibodies are available purified, or with a selection of fluorescent CF® dyes and other labels. CF® dyes offer exceptional brightness and photostability. See the CF® Dye Brochure for more information. Note: Conjugates of blue fluorescent dyes like CF®405S and CF®405M are not recommended for detecting low abundance targets, because blue dyes have lower fluorescence and can give higher non-specific background than other dye colors. Stock status: Because Biotium offers a large number of antibody and conjugation options, primary antibody conjugates may be made to order. Typical lead times are up to one week for CF® dye and biotin conjugates, and up to 2-3 weeks for fluorescent protein and enzyme conjugates. Please email order@biotium.com to inquire about stock status and lead times before placing your order. Catalog number key for antibody number 2387, Anti-SOX9 / SRY-box 9 (SOX9/2387)

<b>Product attributes</b>				
Antibody number	#2387			
Antibody reactivity	SOX9, SRY-box 9			
(target) Antibody type	Primary			
Host species	Mouse			
Clonality	Monoclonal			
Clone	SOX9/2387			
Isotype	IgG1, kappa			
Molecular weight	65 kDa			
Synonyms	Campomelic Dysplasia Autosomal Sex Reversal (CMD1); SRA1; SRXX2; SRY (sex determining region Y) box 9; SRY related HMG box gene 9; Transcription factor SOX9			
Human gene symbol	SOX9			
Entrez gene ID	6662			
SwissProt	P48436			
Unigene	647409			
Immunogen	Recombinant human SOX9 protein fragment (around aa 393-508) (exact sequence is proprietary)			
Antibody target cellular	Nucleus			
Species reactivity	Human			
	For coating for ELISA, order Ab without BSA, Higher concentration may be required for direct detection using primary antibody conjugates than for indirect detection with secondary antibody. Optimal dilution and staining procedure for a specific application should be determined by user, Recommended starting concentrations for titration are 1-2 ug/ml. for most applications, or 1 ug/million cells/100 uL for flow ctometry			
Antibody application notes	BSA, Higher concentration may be required for direct detection using primary antibody conjugates than for indirect detection with secondary antibody. Optimal dilution and staining procedure for a specific application should be determined by user, Recommended starting concentrations for titration are 1-2 ug/mL for most
