

Histone H1 Recombinant Monoclonal Mouse Antibody (rAE-4)

Product Description

Please note that this antibody is a recombinant Mouse version of original anti-histone H1 antibody AE-4). Because the variable heavy (VH) and variable light (VL) domains are the same, recombina antibody has the same exact reactivity as the original AE-4 MAb. There are several advantages of producing a recombinant version of a monoclonal antibody. For example, a recombinant antibody purer preparation of active immunoglobulin with no contaminating non-functional intact Ig or free light/heavy chains. Secondly, antibody can always be produced, even if hybridoma line is lost. Mo it adds the flexibility of converting the antibody to any species, isotype or format. Eukaryotic histor basic and water-soluble nuclear proteins that form hetero-octameric nucleosome particles by wrat 146 base pairs of DNA in a left-handed super-helical turn sequentially to form chromosomal fiber. molecules of each of the four core histones (H2A, H2B, H3, and H4) form the octamer; formed of H2A-H2B dimers and two H3-H4 dimers, forming two nearly symmetrical halves by tertiary structu Over 80% of nucleosomes contain the linker Histone H1, derived from an intronless gene that inte with linker DNA between nucleosomes and mediates compaction into higher order chromatin. This antibody is extensively used as a pan-nuclear marker.

Primary antibodies are available purified, or with a selection of fluorescent CF® dyes and other lat CF® dyes offer exceptional brightness and photostability. See the CF® Dye Brochure for more information. Note: Conjugates of blue fluorescent dyes like CF®405S and CF®405M are not recommended for detecting low abundance targets, because blue dyes have lower fluorescence a give higher non-specific background than other dye colors.

Stock status: Because Biotium offers a large number of antibody and conjugation options, prima antibody conjugates may be made to order. Typical lead times are up to one week for CF® dye ar conjugates, and up to 2-3 weeks for fluorescent protein and enzyme conjugates. Please email order@biotium.com to inquire about stock status and lead times before placing your order.

Catalog number key for antibody number 3518, Anti-Histone H1 (rAE-4)

Synonyms	H1(0); H1.1; H1.2; H1.3; H1.4; H1.5; H10; H1A; H1F0; H1F1; H1F2; H1F3; H1F4; H1F5; H1FNT; H1FOO; H1FT; H1FV; H1FX; H11; H1T2; H1X; HANP1; His1; HisC; HIST1; HIST1H1A; HIST1H1B; HIST1H1C; HIST1H1D; HIST1H1E; HIST1H1T; Oocyte-specific histone H1; Testicular H1 histone	
Human gene symbol	H1	
Entrez gene ID	3005	
SwissProt	Multiple	
Unigene	226117 & 97358	
Immunogen	Recombinant full-length human Histone H1 protein	
Verified antibody applications	Flow (intracellular) (verified), IF (verified), IHC (FFPE) (verified), WB (verified)	
Antibody target cellular localization	Nucleus	
Species reactivity	Human, Mouse, Rat	
Positive control	HeLa, A-431, LNCap or Jurkat cells. Breast carcinoma.	
Shipping condition	Room temperature	
Storage Conditions	Note: store BSA-free antibodies at -10 to -35°C, Store at 2 to 8 °C, Protect fluorescent conjugates from light	
Regulatory status	For research use only (RUO)	
Antibody/conjugate formulation	Conjugates: 0.1 mg/mL in PBS/0.1% BSA/0.05% azide, HRP conjugates: 0.1 mg/mL in PBS/0.05% BSA, Purified: 0.2 mg/mL in PBS/0.05% BSA/0.05% azide, Purified, BSA-free: 1 mg/mL in PBS without azide	
Shelf life	Guaranteed for at least 24 months from date of receipt when stored as recommended	
Product origin	Product may contain either bovine serum albumin (BSA) from bovine serum (Bos taurus), or recombinant BSA produced in	

Chinese hamster ovary cells. Inquire for the specific lot.
