CD28 Monoclonal Mouse Antibody (C28/74)

Product Description

Recognizes a glycoprotein of 44-88 kDa, which is identified as CD28. It is the critical T-cell co-stimulatory receptor which provides to the cell the important second activation signal by binding CD80 and CD86 that are expressed by antigen presenting cells. Besides its co-stimulation role, CD28 functions in preventing T-cells from anergic hyporesponsive state or from undergoing premature apoptotic cell death. CD28 is also expressed on human fetal NK cells and some NK cell lines, whereas on murine NK cells the CD28 expression is much broader.

Primary antibodies are available purified, or with a selection of fluorescent CF® dyes and other labels. CF® dyes offer exceptional brightness and photostability. See the CF® Dye Brochure for more information. Note: Conjugates of blue fluorescent dyes like CF®405S and CF®405M are not recommended for detecting low abundance targets, because blue dyes have lower fluorescence and can give higher non-specific background than other dye colors.

Stock status: Because Biotium offers a large number of antibody and conjugation options, primary antibody conjugates may be made to order. Typical lead times are up to one week for CF® dye and biotin conjugates, and up to 2-3 weeks for fluorescent protein and enzyme conjugates. Please email order@biotium.com to inquire about stock status and lead times before placing your order.

Catalog number key for antibody number 0074, Anti-CD28 (C28/74)

Product attributes

Antibody number	#0074	
Antibody reactivity (target)	CD28	
Antibody type	Primary	
Host species	Mouse	
Clonality	Monoclonal	
Clone	C28/74	
Isotype	IgG1, kappa	
Molecular weight	44 kDa (monomer); 88 kDa (dimer)	
Synonyms	T-cell-specific surface glycoprotein CD28; Tp44	
Human gene symbol	CD28	
Entrez gene ID	940	
SwissProt	P10747	
Unigene	591629	
Immunogen	Recombinant human CD28 protein	
Antibody target cellular localization	Plasma membrane	
Species reactivity	Human	
Antibody application notes	For coating for ELISA, order Ab without BSA, Optimal dilution	
	and staining procedure for a specific application should be determined by user, Recommended starting concentrations for titration are 1-2 ug/mL for most applications, or 1 ug/million cells/100 uL for flow cytometry	
Positive control	determined by user, Recommended starting concentrations for titration are 1-2 ug/mL for most applications, or 1 ug/million	
Positive control Shipping condition	determined by user, Recommended starting concentrations for titration are 1-2 ug/mL for most applications, or 1 ug/million cells/100 uL for flow cytometry
