Cyclin D2 Monoclonal Mouse Antibody (CCND2/2620)

Product Description

Cyclins are a family of proteins that control how cells proceed through the multi-step cycle of cell division. Cyclin D2 helps to regulate a step in the cycle called the G1-S transition, in which the cell moves from the G1 phase, when cell growth occurs, to the S phase, when the cell's DNA is copied (replicated) in preparation for cell division. Cyclin D2's role in the cell division cycle makes it a key controller of the rate of cell growth and division (proliferation) in the body.

Primary antibodies are available purified, or with a selection of fluorescent CF® dyes and other labels. CF® dyes offer exceptional brightness and photostability. See the CF® Dye Brochure for more information. Note: Conjugates of blue fluorescent dyes like CF®405S and CF®405M are not recommended for detecting low abundance targets, because blue dyes have lower fluorescence and can give higher non-specific background than other dye colors.

Stock status: Because Biotium offers a large number of antibody and conjugation options, primary antibody conjugates may be made to order. Typical lead times are up to one week for CF® dye and biotin conjugates, and up to 2-3 weeks for fluorescent protein and enzyme conjugates. Please email order@biotium.com to inquire about stock status and lead times before placing your order.

Catalog number key for antibody number 2620, Anti-Cyclin D2 (CCND2/2620)

Product attributes

Product attributes			
Antibody number	#2620		
Antibody reactivity (target)	Cyclin D2		
Antibody type	Primary		
Host species	Mouse		
Clonality	Monoclonal		
Clone	CCND2/2620		
Isotype	IgG, kappa		
Molecular weight	34 kDa		
Synonyms	CCND 2; ccnd2; CCND2_HUMAN; CyclinD2; G1/S specific cyclin D2; G1/S-specific cyclin-D2; KIAK0002; MGC102758; MPPH3		
Human gene symbol	CCND2		
Entrez gene ID	894		
SwissProt	IDP30279		
Unigene	376071		
Immunogen	Recombinant full-length human Cyclin D2 (CCND2) protein		
Antibody target cellular localization	Nucleus & cytoplasm		
Species reactivity	Human		
	Haman		
Antibody application notes	For coating for ELISA, order Ab without BSA, Higher concentration may be required for direct detection using primary antibody conjugates than for indirect detection with secondary antibody, Optimal dilution and staining procedure for a specific application should be determined by user, Recommended starting concentrations for titration are 1-2 ug/mL for most applications, or 1 ug/million cells/100 uL for flow cytometry
