

## Mucin 5AC / MUC5AC Monoclonal Mouse Antibody (1-13M1)

## **Product Description**

This mucin is present in primary ovarian mucinous cancer but usually absent in colorectal adenocarcinoma, thus showing an expression pattern opposite to MUC2. Together with a panel of antibodies, anti-MUC5AC may be useful for differential identification of primary mucinous ovarian tumors from colon adenocarcinoma metastatic to the ovary. MUC5AC antibodies may also be useful for identification of intestinal metaplasia as well as in the identification of pancreatic carcinoma and pre-cancerous changes vs. normal pancreas. Catalog number key for antibody number 0432, Anti-MUC5AC (1-13M1)

Call us: 800-304-5357

## **Product attributes**

Antibody number	#0432			
Antibody reactivity (target)	MUC5AC			
Antibody type	Primary			
Host species	Mouse			
Clonality	Monoclonal			
Clone	1-13M1			
Isotype	IgG1, kappa			
Molecular weight	>1,000 kDa			
Synonyms	Apomucin Major Airway Glycoprotein, Mucin 5 subtype AC tracheobronchial, Mucin 5 Subtypes A And C, Mucin 5AC oligomeric mucus/gel forming, Tracheobronchial Mucin (TBM)			
Human gene symbol	MUC5AC			
Entrez gene ID	4586			
SwissProt	P98088			
Unigene	534332			
Immunogen	M1 mucin preparation from the fluid of an ovarian mucinous cyst belonging to an O Le(a-b) patient			
Antibody target cellular localization	Secreted (extracellular)			
Expected antibody applications	RIA (published for clone), IHC (FFPE) (published for clone), WE (published for clone)			
Species reactivity	Cat, Chicken, Cow, Human, Monkey, Mouse, Rabbit, Rat			
Antibody application notes	Does not react with Pig or Hedgehog, ELISA: For coating, purchase antibody without BSA, Higher concentration may be required for direct detection using primary antibody conjugates than for indirect detection with secondary antibody, Optimal dilution for a specific application should be determined by user			
	required for direct detection using primary antibody conjugates than for indirect detection with secondary antibody, Optimal			
Positive control	required for direct detection using primary antibody conjugates than for indirect detection with secondary antibody, Optimal
