

CD357 / GITR Monoclonal Rat Antibody (DTA-1)

Product Description

GITR (glucocorticoid-induced TNFR-related gene) is a member of the TNF-receptor superfamily, also known as TNFRSF18. It is expressed at low levels on resting T lymphocytes and at high levels on CD25 CD4 Tregs. The expression of GITR on T cells can be upregulated upon activation. Interaction of GITR with its ligand (GITRL) has been demonstrated to augment T cell activation, proliferation, cytokine production as well as MAPKs and NF-B activation, and abrogate the inhibitory function of CD25 CD4 Tregs. In vivo activation of GITR causes development of autoimmune diseases and restores the suppressed immune response. **Catalog number key for antibody number 0976, Anti-GITR|Tnfrsf18 (DTA-1)**
