

p57 / KIP2 Monoclonal Mouse Antibody (57P06)

Product Description

Recognizes a protein of 57 kDa, identified as p57Kip2. It shows no cross-reaction with p27Kip1. p57Kip2 is a potent tight-binding inhibitor of several G1 cyclin complexes, and is a negative regulator of cell proliferation. Anti-p57 has been used as an aide in identification of complete hydatidiform mole (CHM) (no nuclear labeling of cytotrophoblasts and stromal cells) from partial hydatidiform mole (PHM) in which both cytotrophoblasts and stromal cells stain. The histological differentiation of complete mole, partial mole, and hydropic spontaneous abortion is problematic. Most complete hydatidiform moles are diploid, whereas most partial moles are triploid. Ploidy studies will identify partial moles, but will not differentiate complete moles from non-molar gestations. Complete moles carry a high risk of persistent disease and choriocarcinoma, while partial moles have a very low risk. In normal placenta, many cytotrophoblast nuclei and stromal cells are labeled with this antibody. Similar findings apply to PHM and hydropic abortus tissues. Intervillous trophoblastic islands (IVTIs) demonstrate nuclear labeling in all three entities and serve as an internal control. Catalog number key for antibody number 1264, Anti-KIP2|p57 (57P06)

Antibody research areas

Product attributes			
Antibody number	#1264		
Antibody reactivity (target)	KIP2, p57		
Antibody type	Primary		
Host species	Mouse		
Clonality	Monoclonal		
Clone	57P06		
Isotype	IgG2b, kappa		
Molecular weight	57 kDa		
Synonyms	Beckwith Wiedemann syndrome (WBS); BWCR; Cyclin dependent kinase inhibitor 1C (CDKN1C); KIP2; p57		
Human gene symbol	CDKN1C		
Entrez gene ID	1028		
SwissProt	P49918		
Unigene	106070		
Immunogen	Recombinant full-length human p57Kip2 protein		
Verified antibody applications	pody IHC (FFPE) (verified)		
Antibody target cellular localization	Nucleus		
Species reactivity	Human. Mouse.		
Antibody application notes	Higher concentration may be required for direct detection using primary antibody conjugates than for indirect detection with secondary antibody, Immunohistochemistry (formalin-fixed): 0.25-0.5 ug/mL for 30 minutes at RT, Flow cytometry: 0.5-1 ug/million cells, immunofluorescence: 0.5-1 ug/million cells, immunofluorescence: 0.5-1 ug/million cells, firmunofluorescence: 0.5-1 ug/million cells firmunofluorescence: 0.5-		
	ug/million cells, Immunofluorescence: 0.5-1 ug/mL, Staining of formalin-fixed tissues requires boiling tissue sections in 10 mM citrate buffer, pH 6.0, for 10-20 minutes followed by cooling at RT for 20 minutes, Optimal dilution for a specific application		
Positive control	ug/million cells, Immunofluorescence: 0.5-1 ug/mL, Staining of formalin-fixed tissues requires boiling tissue sections in 10 mM citrate buffer, pH 6.0, for 10-20 minutes followed by cooling at RT for 20 minutes, Optimal dilution for a specific application		
Positive control Shipping condition	ug/million cells, Immunofluorescence: 0.5-1 ug/mL, Staining of formalin-fixed tissues requires boiling tissue sections in 10 mM citrate buffer, pH 6.0, for 10-20 minutes followed by cooling at RT for 20 minutes, Optimal dilution for a specific application should be determined by user LS174T, Raji, HT29, SK-BR3 cells. Colon or Prostate
