## Alpha-Fetoprotein Monoclonal Mouse Antibody (C2 + C3 + MBS-12)

## **Product Description**

Alpha-fetoprotein (AFP) is an oncofetal glycoprotein with a single chain of 70 kDa. This MAb is highly specific to AFP and shows no cross-reaction with other oncofetal antigens or serum albumin. AFP is normally synthesized in the liver, intestinal tract, and yolk sac of the fetus. Antibody to AFP has been shown to be useful in detecting hepatocellular carcinomas (HCC) and germ cell neoplasms, especially yolk sac tumors.

Primary antibodies are available purified, or with a selection of fluorescent CF® dyes and other labels. CF® dyes offer exceptional brightness and photostability. See the CF® Dye Brochure for more information. Note: Conjugates of blue fluorescent dyes like CF®405S and CF®405M are not recommended for detecting low abundance targets, because blue dyes have lower fluorescence and can give higher non-specific background than other dye colors.

Stock status: Because Biotium offers a large number of antibody and conjugation options, primary antibody conjugates may be made to order. Typical lead times are up to one week for CF® dye and biotin conjugates, and up to 2-3 weeks for fluorescent protein and enzyme conjugates. Please email <a href="mailto:order@biotium.com">order@biotium.com</a> to inquire about stock status and lead times before placing your order.

Catalog number key for antibody number 0810, Anti-AFP (C2 C3 MBS-12)

## **Product attributes**

Product attributes				
research-areas	Cancer, Developmental biology			
Antibody number	#0810			
Antibody reactivity (target)	AFP, Alpha-fetoprotein			
Antibody type	Primary			
Host species	Mouse			
Clonality	Monoclonal			
Clone	C2 C3 MBS-12			
Isotype	IgG's			
Molecular weight	70 kDa			
Synonyms	Alpha-fetoglobulin; FETA; HPAFP			
Human gene symbol	AFP			
Entrez gene ID	174			
SwissProt	P02771			
Unigene	518808			
Immunogen	Recombinant full-length human Alpha fetoprotein			
Antibody target cellular localization	Cytoplasmic, Golgi apparatus			
Verified antibody applications	Flow (intracellular) (verified), IF (verified), IHC (FFPE) (verified)			
Species reactivity	Human			
Antibody application notes	Immunohistology formalin-fixed 1-2 ug/mL, Staining of formalin-fixed tissues requires boiling tissue sections in 10 mM citrate buffer, pH 6.0, for 10-20 min followed by cooling at RT for 20 minutes, Immunofluorescence 0.5-1 ug/mL, Flow Cytometry 0.5-1 ug/mllilion cells/0.1 mL, Optimal dilution for a specific application should be determined by user			
Positive control	HepG2 cells. Fetal liver or hepatocellular carcinoma			
	riepaz ceilo. I eta liver ol riepatoceilalar carellorila			
Shipping condition	Room temperature			
Shipping condition Storage Conditions
