Involucrin Monoclonal Mouse Antibody (IVRN/827)

Product Description

This antibody recognizes a protein of 66 kDa-170 kDa, identified as involucrin. In Western blotting of cultured human keratinocytes, this MAb reacts with a 120 kDa protein. Involucrin is expressed in a range of stratified squamous epithelia, including the cornea, which lacks a distinct cornified layer. In normal epidermis, it is first expressed in the upper spinous layers, and in keratinocyte cultures, all cells that have left the basal layer express it. Involucrin expression is altered in pathological conditions: in psoriasis and other benign epidermal hyperplasias, involucrin expression begins closer to the basal layer than normal; expression is abnormal in squamous cell carcinomas and premalignant lesions, and is reduced in severe dysplasias of the larynx and cervix.

Primary antibodies are available purified, or with a selection of fluorescent CF® dyes and other labels. CF® dyes offer exceptional brightness and photostability. See the CF® Dye Brochure for more information. Note: Conjugates of blue fluorescent dyes like CF®405S and CF®405M are not recommended for detecting low abundance targets, because blue dyes have lower fluorescence and can give higher non-specific background than other dye colors.

Stock status: Because Biotium offers a large number of antibody and conjugation options, primary antibody conjugates may be made to order. Typical lead times are up to one week for CF® dye and biotin conjugates, and up to 2-3 weeks for fluorescent protein and enzyme conjugates. Please email order@biotium.com to inquire about stock status and lead times before placing your order.

Catalog number key for antibody number 0827, Anti-Involucrin (IVRN/827)

Call us: 800-304-5357

Product attributes				
Antibody number	#0827			
Antibody reactivity (target)	Involucrin			
Antibody type	Primary			
Host species	Mouse			
Clonality	Monoclonal			
Clone	IVRN/827			
Isotype	lgG1, kappa			
Molecular weight	66-170 kDa			
Synonyms	IVL			
Human gene symbol	IVL			
Entrez gene ID	3713			
SwissProt	P07476			
Unigene	516439			
Immunogen	Purified involucrin from human keratinocytes			
Verified antibody applications	IHC (FFPE) (verified)			
Antibody target cellular localization	Cytoplasmic			
Species reactivity	Human			
Antibody application notes	Higher concentration may be required for direct detection using primary antibody conjugates than for indirect detection with secondary antibody, Immunofluorescence: 1-2 ug/mL, Immunohistology formalin-fixed 0.1-0.2 ug/mL, Stlaining of formalin-fixed tissues is enhanced by digestion with trypsin or Protease XXV at 1 mg/mL PBS for 5 min at 37C, Flow Cytometry 0.5-1 ug/million cells/0.1 mL, Note than enzyme digestion is better than citrate buffer based epitope unmasking, Optimal dilution for a specific application should be determined by user
