SECTION 8: Exposure controls/personal protection

8.1. Control parameters

sodium azide

Short term exposure limit (15 minutes) (mg/m³): 0,3

Long term exposure limit (8 hours) (mg/m³): 0,1

Annotations:

D = The absorption of the agent through the skin, the mucous membranes or the eyes is an important part of the total exposure. Absorption is achieved both by direct contact and by the presence of the agent in the air.

M = When the exposure exceeds the limit value, risk of irritation or acute toxicity may occur. The working method must be designed in such a way that the exposure never exceeds the limit value. During measurements, the sampling period should be as short as possible in order to be able to make reliable measurements. The result of the measurements is calculated according to the sampling period.

Exposure limits

Professional users are subjected to the legally set maximum concentrations for occupational exposure. See occupational hygiene limit values above.

Appropriate technical measures

The formation of vapours must be kept at a minimum and below current limit values (see above). Installation of a local exhaust system if normal air flow in the work room is not sufficient is recommended. Ensure eyewash and emergency showers are clearly marked.

Apply standard precautions during use of the product. Avoid inhalation of vapours.

Hygiene measures

Wash hands after use.

Measures to avoid environmental exposure

No specific requirements.

Individual protection measures, such as personal protective equipment
